Frdric Lert : General Dynamics / Lockheed-Martin F-16 A and B Versions, Vol. 1: Fighting Falcon (Great American Combat Aircraft) before purchasing it in order to gage whether or not it would be worth my time, and all praised General Dynamics / Lockheed-Martin F-16 A and B Versions, Vol. 1: Fighting Falcon (Great American Combat Aircraft):

0 of 1 people found the following review helpful. Nice PicturesBy DesertratThis book is not a definitive history of the F-16 A and B aircraft. While it does provide a decent high level overview of the program, it is way short on details. It does have some great color pictures which should be useful for scale modelers.

At a time when other planes retire to museums, General Dynamics' fighter-bomber is still a formidable foe in international competitions against so-called "fifth generation" planes. The first prototype flew for the first time in 1974 and the operational career of the last aircraft built will continue well into the 2040s. Almost seventy years and still going strong! Meanwhile, this light fighter was optimized for daytime missions and became a formidable fighter-bomber; more than 4,400 were built and used by more than 25 countries.Two volumes in our series will be devoted to the F-16. The first examines its development and the F-16A and B, while Volume 2 is dedicated to F-16C and D.Frederic Lert is a professional aviation journalist, and the author of the highly acclaimed Wings of the CIA, the B-

52s, and Sepecat Jaguar.

A well written, detailed and interesting story... covering the development prototypes and the first in-service models, the A and B... extensively illustrated with some high quality photographs, all of which are well captioned. Add some equally excellent color profiles and not only do you get a good story about the development of the F-16, but for modelers there is just so much reference material this is one I think any F-16 fan will want to have it on their bookshelf. (Military Modeling) About the Author Frederic Lert, professional aviation journalist, travels extensively through the two hemispheres in search of the most adventurous reportages. Already author of recognized works (The Wings of the CIA, the B-52), he covers, in the context of this series, a role of specialist for the years 1960-1980.
